

ANSWER ENGINE OPTIMISATION ANALYSIS

AEO Intelligence Report

5

OUT OF 10

Partial visibility
– room to grow

OVERALL AEO SCORE

Fallow Fields Camping has a solid technical foundation for AEO — an open robots.txt, structured Schema.org markup (Organization, LocalBusiness, Campground) — but currently has zero visibility across all eight tested consumer queries related to Kent family camping, glamping, and budget holidays. This is a critical gap: despite having a genuinely strong value proposition (affordable family camping, activities, bell tents, beach proximity), answer engines are not surfacing Fallow Fields at all, while a key competitor (Camping and Caravanning Club) captures 50% visibility on the same query set. The absence of LLMs.txt/LLMs-full.txt files and likely thin topical content/FAQ coverage means AI answer engines lack the structured, quotable content needed to associate Fallow Fields with these high-intent queries.},

TECHNICAL AUDIT

✓ robots.txt	allowed
✗ llms.txt	missing
✗ llms-full.txt	missing
✓ Structured Schema	present

VISIBILITY INSIGHT

Fallow Fields currently scores 0% visibility across all tracked queries, while Camping and Caravanning Club already captures 50% visibility on the same query set, giving it a decisive early lead in answer engine mindshare.

AI VISIBILITY

8 BENCHMARK QUERIES

Fallow Fields Camping	0%
Camping and Caravanning Club	50%
Parkdean Resorts	0%
Haven Holidays	0%
Butlins	0%
Pontins	0%

● KEY IMPROVEMENTS

What to fix, in priority order.

01 Publish LLMs.txt & LLMs-full.txt

Neither file currently exists, meaning answer engines have no direct guidance on how to interpret and prioritize Fallow Fields' content, putting it at a structural disadvantage versus competitors optimizing for AI crawlers.

02 Build Query-Matched FAQ Content

Zero visibility across all 8 tested queries suggests no content directly answers these specific family camping, glamping, and location-based questions; creating dedicated pages/FAQs matching this exact phrasing would directly target answer engine retrieval.

03 Expand Schema with FAQPage & Offer Markup

While Organization, LocalBusiness, and Campground schema exist, adding FAQPage, Offer (pricing from £17/night), and Review schema would give answer engines richer structured data to extract for comparison-style queries against competitors.

● QUICK WIN

Create and publish an FAQ-style content hub (and llms.txt file) directly answering the exact tracked queries – e.g. "Best family campsites in Kent," "Camping with dogs in Kent," "Furnished bell tents in England" – using clear, concise, quotable answers with embedded LocalBusiness/FAQPage schema to give answer engines easily extractable content.

NEXT STEP

This report is generated automatically. If you'd like the fixes implemented – schema, llms.txt and answer-optimised content – I deliver the work end to end.
